

## MOBILITY FOR YOUR HORSE

eQlube is a proprietary microencapsulated complex of Glucosamine Hydrochloride including Ubidecarenone and SOD (Superoxide Dismutase) as antioxidants.

*For nutritional prophylactic veterinary use only. Available through licensed veterinarians.*

- eQlube provides a highly concentrated microencapsulated form of Glucosamine HCl.
- Microencapsulation ensures greater absorption by avoiding stomach acid degradation.
- Glucosamine HCl has been proven to have a higher bioavailability with a lower dose due to better absorption in the gut compared to Glucosamine sulphate.
- Our own studies have shown improvement in horses that were previously treated with other Glucosamine preparations—this suggests a greater efficacy of eQlube.
