

FORTE
eQlube™

A proprietary blend of Glucosamine Hydrochloride with Vitamin C as an antioxidant and Methylsulfonylmethane (MSM) as a dietary sulfur supplement.

- For use as a veterinary nutritional supplement only.

1.4 kg Net

MOBILITY FOR YOUR HORSE

- **Glucosamine HCl** has been proven to have a higher bioavailability with a lower dose due to better absorption in the gut compared to Glucosamine Sulphate
- **Calcium Ascorbate** is a natural form of Vitamin C, much more readily absorbed than other forms, delivering the benefits of both Calcium and Vitamin C
- **MSM** is a healthy and safe dietary sulfur supplement to aid in vitamin and amino acid utilization
- Our own studies have shown improvement in horses that were previously treated with other Glucosamine preparations – this suggests a greater efficacy of **eQlube FORTE**.
